

SelectaDNA Intruder Spray

The Robbery and Commercial Burglary Deterrent

The SelectaDNA Spray System can be integrated into your existing security system to offer an additional, powerful deterrent to potential offenders.

Installation and promotion of SelectaDNA Spray will help keep your property, assets and employees safe from robberies and out-of-hours attacks.

-  **Police Approved**
-  **Effective deterrent to criminals**
-  **Can be fully integrated into existing systems**
-  **Ideal for night and daytime protection**
-  **Proven DNA technology to convict offenders**

SelectaDNA Spray Systems are an advanced way to protect your retail premises, assets and employees from criminals by adding the powerful deterrent of DNA to your existing security system.

By installing our Spray System and prominently displaying our warning signs and stickers you reduce the risk of commercial burglary, armed robbery and retail theft because criminals fear our DNA technology.

How Does it Work?

When activated, SelectaDNA Spray covers offenders with an invisible synthetic DNA solution that marks skin and clothing for days, weeks or even months.

The system can be activated either by connecting it to an existing alarm system or through a panic button, money clip or RFID device, according to your particular needs.

Once the system is active, anyone passing underneath the spray head will be detected by an infrared sensor, triggering the mechanism and releasing a burst of SelectaDNA Spray onto the fleeing offender. Unlike other systems, the SelectaDNA system emits controlled bursts of Spray, meaning that your property is not covered in solution that requires expensive clean-up operations.

The solution contains a unique DNA code, which only exists in that particular system, and UV tracer and it clings to skin and clothing fibres for days, weeks or even months. This helps police detect the criminal and connects them irrefutably to a particular crime.

Displaying our warning signs and window stickers on your premises will deter potential criminals from targeting your property in the first place.

Detection

SelectaDNA Spray forms such an effective deterrent because criminals know the police will catch them once marked.

We work closely with police forces around the world to educate them how to locate traces of our Spray. It is now common practice for custody officers to search criminals with UV light - and when they glow blue both the criminal and police know they will be able to secure a conviction, often through an immediate confession.

System Specifications

The SelectaDNA Spray System is configured to match the specific requirements of each client.
